

EDUMIND PRODUCT DESIGN

Global Mobile UI Benchmark

How Khan Academy, Coursera, Duolingo, and Upwork answer “what should I do now?” — and what EduMind Student Home should learn without copying their look.

Khan Academy v8.5.1

Coursera v8.18.1

Duolingo v7.138.0

Upwork v2.12.0

Visual research report · 5 Sep 2026

Screenshots from official App Store listings and official product blogs.

Do not implement from this file. Android source was not modified.

What the four Homes actually do

EduMind Home must answer four questions: what to do now, what needs attention, what is happening today/this week, and how I am progressing. None of the four apps solve all four. Each is strong at one job.

Khan Academy Calm catalog + mastery. Next action appears inside a course (Mastery Challenge), not as a student-day dashboard. Hierarchy is excellent. Habit, planner, and AI chat are weak or missing on mobile.	Coursera Best Continue Learning card: course, module, percent, duration, Play. Home/Learn is still a course list. Discovery and certificates dominate store creative. EduMind must not copy this as Student Home.
Duolingo Best next action in the world: one START node on a path. Streak, XP, and leagues create habit. Aesthetic is cartoon. Borrow the principle, not the owl.	Upwork Professional density, scanning, messaging, and a named AI (Uma) with a single insert CTA. Not a learning Home — use it for cards, nav, and AI semantics.

Limitation: App Store creatives often frame production UI inside marketing art (angled phone, slogan). They are still official store screenshots of current iOS listings (accessed 5 Sep 2026). Duolingo path Home is documented with official blog UI from 2022 (path launch) and Feb 2026 (core tabs refresh).

Browse hierarchy — calm education, not a dashboard

Khan’s top-level mobile job is **find a subject**. Search + Filter + a chevron list. “Surprise me!” is the only playful CTA. This is catalog UX. EduMind should keep this pattern in **موادي**, not on الرئيسية.

- 1 **Search first.** Discovery is a tool, not a feed.
- 2 **One-column list.** Math → Science → Economics. Icons are optional; chevrons do the work.
- 3 **Whitespace is the brand.** Few colors, lots of air. Feels like a textbook, not a marketplace.
- 4 **Missing for EduMind:** greeting, today, streak, tutor, messages. Khan Home is not a student OS.

Borrow: subject list density and quiet type for **موادي** and lesson trees.

The closest Khan gets to “what now?”

Inside 5th grade Math, Khan puts a **Mastery Challenge** card above the unit list. That is their next-mission pattern. Progress is mastery points, not a streak flame.

- 1 **Context bar:** Math · 5th grade. Always know where you are.
- 2 **Mastery Points 17%.** Quantitative progress at course level.
- 3 **Get started** is the only primary button. One next action.
- 4 **Unit** → **lesson list** under the CTA. Hierarchy Course → Unit → Lesson.
- 5 **Bottom nav:** Home · Explore · Bookmarks. Three destinations. Simple.

Khanmigo chat is **not** in the Khan Academy app. Official Help: Activities only in-app v8.0+; full tutor is mobile web. Do not cite a Khanmigo chat screenshot as native app UI.

Lesson: one problem, then Up next

OFFICIAL APP STORE Video lesson — player + Bookmark/Share/Transcript + Up next playlist.

UX takeaway: Decision fatigue is killed by showing one problem. Sequence is shown as “Up next”, not as a catalog. EduMind lessons should feel this calm. Keep AI as a cyan assist, not a second lesson type competing on the same row.

Store Home is a career marketplace. Learn is a course list.

Coursera’s official iOS creatives sell experts, certificates, and career paths. That is the pattern EduMind Student Home must **avoid**. The useful screen is “All Courses / Start Today”: resume + progress + Play.

- 1 Title is “All Courses”. This is My Learning, not a day OS.
- 2 Hero card: Google UX certificate, Course 2 of 5, 60%, current lesson “Prototyping with Figma”, 6 min, Play.
- 3 Time-to-start next to Play reduces friction. EduMind should show minutes left on المهمة التالية.
- 4 Secondary course uses “Get Back Into It” ghost button. One primary, others quieter.

Avoid on الرئيسية: partner logos, career-path catalogs, certificate grids, “Learn with experts”. That lives in استكشف / subscriptions, not Student Home.

Lesson tools vs catalog chrome

Languages sheet — settings in a sheet, not a pushed jungle.

Borrow: continue-learning anatomy (provider, % , lesson name, duration, one Play). **Borrow:** sheets for settings/language. **Avaid:** Home as discovery. Coursera Help Center also names a dedicated **Learn tab** for enrolled programs — catalog is a different surface.

Home = one START. That is the whole product.

Official Duolingo blog (May 2022 / path live 1 Nov 2022) documents the current Home architecture: a vertical path, one highlighted node, START. Feb 2026 core-tabs post shows the same path still in production with refreshed tabs.

OFFICIAL BLOG · 2022

Old skill tree → new learning path

blog.duolingo.com/new-duolingo-home-screen-design/

- 1 **Decision fatigue.** Old Home: many skill circles. New Home: one START.
- 2 **Unit header** answers “what am I learning?” — “Use basic phrases, greet people.”
- 3 **Locked future** is visible but not tappable. Path, not menu.
- 4 **Top stats:** flag, streak, gems, hearts. Motivation without a dashboard essay.

Borrow for المهمة التالية: one obvious node, one verb, everything else secondary. Do not borrow the winding cartoon path or mascot.

2026 tabs: Home still owns next action; other tabs own motivation

Home is not where leagues, quests, and feed live. EduMind should likewise keep XP/streak as a **snapshot** الرئيسية, and push leagues-style social (if ever) off Home. Video-call AI is a dedicated tab with a single CALL +XP CTA — named character, one action.

A screenshot of the Duolingo streak recap screen. At the top, a speech bubble from the character Duo says, "Keep it up! I'm off to brag about your streak." Below this is a large orange number "3" with the text "day streak" underneath it. A progress bar shows a week of days: Su, Mo, Tu, We, Th, Fr, Sa. The first three days (Su, Mo, Tu) are marked with orange circles containing white checkmarks, while the remaining four days (We, Th, Fr, Sa) are marked with grey circles. At the bottom, a large orange button contains the text "keep your daily streak". The footer includes the text "OFFICIAL APP STORE Streak recap — huge 3, week dots, one orange CTA."

Do not copy: cartoon bodies, lowercase slogans on giant candy buttons, hearts-as-punishment, leagues as the emotional core of Home. **Do copy:** one task per screen, visible lesson progress, streak as a small amber chip.

Professional scanning, not education

Upwork is here for density, messaging, and AI-in-a-task. Home is not a learning dashboard.

- 1 **Scanable rows.** Work in progress, In review, Pending, Available. EduMind progress snapshot can be this dense.
- 2 **Color is labels, not decoration.** Green type, black numbers, grey chevrons.
- 3 **One tap to detail.** Summary never dumps the full ledger on Home.

Borrow: compact metric list for اختبار / أيام / XP / المستوى الدراسة. Not a four-color infographic.

Messages, projects, named AI

Stay in touch with real-time messaging

Hi! Welcome to your messaging room.

It's just you, Jason H., and Emily H. in here. Feel free to chat, collaborate, send files, and even have a quick call.

Tuesday, Dec 9

Jason H. 3:22 PM

Hi! Do we have a notes doc ready for the sessions? If not, I can create one!

Emily H. 3:41 PM

Hey @JasonH! I created this one a while back that I think we could probably use. If not, let me know and we can work together on creating a new one.

Submit proposals

Uma, help me write my proposal.

Sure! Could you share a project where you converted a Figma design to a Webflow website?

I recently converted a detailed Figma design into a responsive Webflow website, incorporating interactive elements and leveraging Webflow's CMS.

Excellent! Let's put these insights together into a compelling proposal!

Cover letter

As an experienced Webflow developer, I specialize in converting Figma designs into pixel-perfect Webflow websites. I don't rely on plugins for this process, ensuring a more accurate and customized result...

Insert cover letter

OFFICIAL APP STORE

Uma AI — chat in the task, then Insert cover letter.

AI rule from Uma: assistant has a name/mark, lives inside the job, produces an insertable artifact, one green CTA. EduMind AI Tutor should be cyan, task-bound (explain this quiz / plan this session), never a second Home feed.

Upwork

Status rows

Work OS, not learn OS

EduMind Home is closer to **Duolingo’s job** (next action) + **Khan’s calm** + **Coursera’s resume anatomy** + **Upwork’s density** — with planner/routine that none of them have.

Annotating the Home job-to-be-done

Home question	Khan	Coursera	Duolingo	Upwork
What should I do now?	Mastery Challenge in-course	Play on top enrolled card	START on path	Context-specific (pay / apply)
What needs attention?	Weak — mastery only	Weak — resume only	Hearts / quests (off Home)	Strong — statuses & unread
Today / this week?	No	No (deadlines buried)	Streak week + quests	Due dates on contracts
Continue?	Pick up where you left off (copy)	Excellent	Always the next node	N/A
Progress?	Mastery %	Course %	Path + XP + streak	Money states
Above-the-fold cards	~1 CTA + units	1–2 course cards	1 node + unit header	4 metric rows

EduMind already has the right sections in code (JourneyHero, Today/This week, توصية EduMind, تابع التعلم, progress, لمحة المواد). The benchmark says: **make المهمة التالية visually dominant like Duolingo START**, keep catalog in مواد like Khan browse, and never let Home become Coursera Learn.

Pattern ratings for EduMind

Pattern	Khan	Coursera	Duolingo	Upwork	EduMind relevance
Clear next action	Medium	Strong	Strong	Medium	Core of الرئيسية
Personalized recommendation	Medium	Medium	Weak	Medium	EduMind / cyan AI توصية
Current progress	Strong	Strong	Strong	Strong	Snapshot, not a chart wall
Today / week context	Weak	Weak	Medium	Medium	EduMind differentiator
Continue learning	Medium	Strong	Strong	n/a	Secondary to Next Mission
Card density	Low-med	Medium	Low	High	2–3 major cards above fold
Content discovery	Strong	Strong	Weak	Strong	Keep off Home
Motivation / streak / XP	Weak	Weak	Strong	n/a	Amber chips, not a game
AI / tutor	Weak in-app	n/a	Medium	Strong Uma	Cyan, task-scoped
Navigation	3 tabs	Learn vs catalog	6 tabs	Clear IA	Student: 5–6 tabs max
Notifications	Medium	Medium	Medium	Strong	Bell in top bar
Messages	Weak	Weak	Weak	Strong	Tab + badge, not Home body
Profile	Medium	Medium	Strong	Strong	حسابي owns identity
Visual complexity	Low	Medium	Playful	Dense-pro	Professional + air

What EduMind should learn

Khan Academy

- Course → unit → lesson tree
- Whitespace, serif/sans mix for lesson titles if needed — or Cairo only, but keep air
- One Check / Get started per screen
- 3-item bottom nav as a ceiling for “primary jobs”

Coursera

- Continue card: title, step “3 of 8”, %, minutes, Play
- Ghost button for secondary courses
- Sheets for language / settings
- Transcript/notes adjacent to player

Duolingo

- One START / المهمة التالية above the fold
- Lesson = one prompt
- Streak as a tiny amber signal
- Motivation tabs ≠ Home

Upwork

- Metric rows + chevron
- File/message cards
- Named AI + Insert CTA
- Status pills (قادم / يحتاج متابعة)

What EduMind should not become

Not Coursera Home

No partner logo walls, career paths, or certificate mosaics on the main page. Catalog belongs in **المواد / استكشف / الاشتراكات**.

Not Duolingo skin

No owl, no candy path, no 6 equally loud tabs of games. No hearts that punish studying. EduMind is school-grade, indigo, Cairo, RTL.

Not Khan-only catalog

A browse list does not tell a Syrian 11th-grader what to do at 6:30pm. Khan has no Routine, Planner, or parent loop.

Not Upwork feed

Do not pack Home like a job list. Density is for snapshots and messages, not for 12 competing CTAs.

EduMind Student Home hierarchy

Not an LMS Home. A daily operating system. Terminology matches current product (ST01).

1. **Top bar:** الرئيسية · bell (notifications) · avatar → حسابي. Optional streak flame (amber) as icon, not a banner.
2. **Greeting:** رنا صباح الخير، رنا + one-line context (مستوى / صف).
3. **المهمة التالية (Next Mission):** Dominant card. Subject, lesson name, minutes left, 8 من 3 درس, PrimaryButton متابعة الدرس. Locked state → الاشتراكات. This is Duolingo START + Coursera Play.
4. **هذا الأسبوع / اليوم:** Max 3 planner rows + routine signal. Ghost المخطط. Differentiator vs all four apps.
5. **EduMind:** يحتاج انتباهك / توصية. One cyan-marked card. Weak topic, bad quiz, missed routine, upcoming exam. Never more than one recommendation.
6. **تابع التعلم:** Only if different from Next Mission. Else omit.
7. **Progress snapshot:** Level, XP to next, streak days, last quiz %. Upwork-style rows.
8. **لمحة المواد:** 3-2 subject chips + "الكتالوج في موادي". Khan browse does not live here.

Above the fold (first screen): top bar + greeting + Next Mission + maybe the first Today row. Everything else scrolls. Maximum **two** major cards before scroll.

Hierarchy only — not final UI

Visual rules

- Indigo = primary action only once per screen
- Cyan border = AI / توصية, never a second primary button
- Amber = streak/XP only
- Green = routine / success
- ~18dp radius, white cards, light grey canvas
- RTL: numbers stay, chevrons flip, greeting on the right

Bottom nav is the product map. Home does not repeat موادّي as a grid.

Mobile UX rules for Jetpack Compose

Layout

- One dominant next action above the fold. Use `PrimaryButton` once.
- Max 2 major EduCards before first scroll; 3 planner rows max.
- Section spacing = existing `Spacing.section`; do not tighten to Upwork density on Home.
- Card density: Home medium; مواد can be tighter lists (Khan); messages can be denser (Upwork).

Navigation

- Keep student tabs: الرئيسية · روتيني · اللغات · مشاريع · مواد · حسابي. Do not add a 7th “Discover” tab on Home.
- Drawer/hamburger: secondary only (settings, parent link, legal). Not primary IA.
- Notifications: top-bar bell + badge. Messages: dedicated entry in حسابي or a badge, not a Home module of threads.
- Sheets: language, filters, “why this session”, AI short assist. Pushed screens: lesson, quiz, course, chat thread.

AI

- Cyan AiMarker + one recommendation card. Uma pattern: produce an action (open lesson / insert plan), not an essay.
- Do not put a chat composer on Home.

Progress / RTL

- XP/streak as compact snapshot; achievements preview can sit below, not compete with Mission.
- RTL: Arrangement respects layout direction; linear progress mirrors; numerals use existing numeral helper.

Final design principles

1. **Home is a mission, not a mall.**
2. **One verb.** متابعة الدرس / ابدأ / راجع. Everything else is ghost or text.
3. **School-grade visual.** Indigo, white, 18dp, Cairo. Cyan only for real AI.
4. **Today is our wedge.** Planner + Routine do not exist on the four benchmarks. Protect them.
5. **Catalog has a house.** مواد. Home only snapshots.
6. **Motivation is amber dust, not a game OS.**
7. **Cite production UI.** This PDF prefers App Store + official blogs. Marketing frames are labeled.

Research only. No Android / Gradle / Kotlin changes were made.
